

## 5. ONLINE SHOPPING SYSTEM

Problem Statement: The online shopping system for all kinds of products web application is intended to provide a complete solution for the internet. It will enable vendors to set up online shops, customers to browse through the shop and purchase them online without having to visit the shop physically. The administrator module will enable a system administrator to approve and reject requests for new shops and maintains various lists of shop category. This system allows the customers to maintain their cart for addition or removal of the product in the cart over internet.

### Software Requirement Specification:

- The Customer must have an account in the online website where he or she can purchase products.
- If customer wants to buy the products then he or she must be registered,unregistered user cannot buy from the website.
- Customer logs in to the system by entering valid credentials for shopping.
- Changes to the cart means the customer after login or registration can order or cancel order of the product(s) from the shopping cart.
- The products sold for customer care sold for various categories like,men, women, kids and home products.
- For customer, there are many secure payment options available viz., debit card, credit card, cash on delivery or UPI. the security will be provided by the third party.
- After the payment or surfing the product, the customer will log out.
